

PRECISION PENCIL LOADING

Hold barrel and turn cap clockwise until all lead is expelled and metal rod appears at point. Then turn back completely . . . insert lead . . . and press against a hard surface to seat lead in clutch.

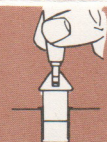

CONVERTER FILL SYSTEM

Unscrew barrel and insert converter. Immerse point of pen completely in Skrip® writing fluid. Squeeze the converter spring lever two or three times. Wait five seconds before removing point from fluid. Replace barrel. (Adapt to cartridge use any time by removing inner apparatus.)

SKRIP® CARTRIDGE FILL

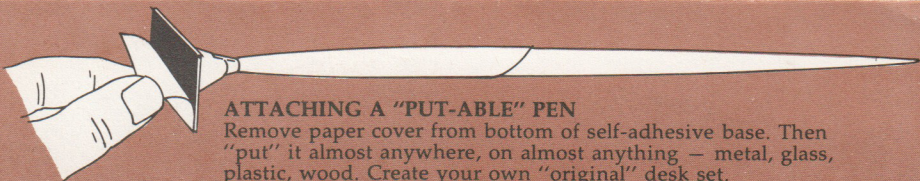

Grip section near point. Unscrew barrel, insert cartridge (either end first) into barrel. Screw on point section to engage. On first fill of new pen, squeeze cartridge gently to ease fluid into point. Replace barrel. Do not attempt to push cartridge directly onto the pierce tube.

DESK SET ASSEMBLY

Push socket into base until it snaps firmly in place . . . and still swivels freely. Remove from base by pulling socket straight up.

DESK SET REPAIR: Send only portion of desk set (pen, socket or base) requiring attention. In case of chipped or broken base, you will receive a written quote of base exchange prices.

ATTACHING A "PUT-ABLE" PEN

Remove paper cover from bottom of self-adhesive base. Then "put" it almost anywhere, on almost anything — metal, glass, plastic, wood. Create your own "original" desk set.

SHEAFFER, WORLD-WIDE, A **textron** COMPANY • FORT MADISON, IOWA 52627

In Canada: Goderich, Ontario. In Australia: Melbourne. In Great Britain: Hemel Hempstead.

Protective Sleeve Tip – precisely matches lead size to reduce lead wobble, breakage.

Innerspring Clip – grips tightly on light or heavy fabrics without bending loose.

The **“White Dot”** – mark of the finest in design, materials and craftsmanship, world-wide.

Lead Storage Compartment – convenient storage for extra leads.

Precision Mechanism – spiral track and follower assembly for propel-repel-expel action.

Lead “Clutch” – firmly grips lead so it can't fall out or turn inside sleeve tip.

Concealed Eraser – may be adjusted in height as wear occurs.

Barrel Tip – supports writing point, prevents wobble.

Retraction Spring – high-grade piano wire spring stays in barrel. No replacement necessary when changing refills.

Giant Ink Reservoir – long-lasting refill utilizes practically entire barrel cavity.

Safeguard® Clip – controls point action. Can't be clipped to pocket with point out.

Textured Carbide Ball – textured ball grips paper, writes smoother.

Special Ink Formula – with built-in lubricant for smooth ball action and flow.

Control Cam – made of DuPont Delrin, locks refill securely in either in or out position.

Clip Tension Spring – specially tempered stainless steel for sure grip, minimum wear.

Ruthenium Ball Tip – highly resistant to wear, glides effortlessly over paper.

Capillary Stem – 19 tiny fluid wells assure fast starts, constant even ink flow.

Cap Retaining Ring – eliminates screwing cap off and on, maintains tight fit.

Humidor Cap – two caps in one create seal to prevent drying and corrosion.

Inlaid Nib – 14K gold or stainless steel, molded into a single integral unit.

Cartridge Ink System – allows clean, quick, easy drop-in loading of ink cartridges.

Converter Fill System – press side lever 2 to 3 times to draw ink from conventional ink bottle.

Innerspring Clip – grips tightly, expands for thicker fabrics without bending loose.
